- 1. DDL Data Definition Language
- 2. DQL Data Query Language
- 3. DML Data Manipulation Language
- 4. DCL Data Control Language
- 5. TCL Transaction Control Language

- <u>CREATE</u>: This command is used to create the database or its objects (like table, index, function, views, store procedure, and triggers).
- **DROP**: This command is used to delete objects from the database.
- ALTER: This is used to alter the structure of the database.
- TRUNCATE: This is used to remove all records from a table, including all spaces allocated for the records are removed.
- <u>COMMENT</u>: This is used to add comments to the data dictionary.
- **RENAME**: This is used to rename an object existing in the database.
 - **SELECT**: It is used to retrieve data from the database.
- INSERT: It is used to insert data into a table.
- **UPDATE**: It is used to update existing data within a table.
- **DELETE**: It is used to delete records from a database table.
- LOCK: Table control concurrency.
- CALL: Call a PL/SQL or JAVA subprogram.
- **EXPLAIN PLAN**: It describes the access path to data.

CREATE TABLE [schema.] table (column datatype [DEFAULT expr][, ...]);

Data Type Description

VARCHAR2 (size) Variable-length character data

CHAR (size) Fixed-length character data

NUMBER (p, s) Variable-length numeric data

DATE Date and time values

LONG Variable-length character data (up to 2 GB)

CLOB Character data (up to 4 GB)

RAW and LONG Raw binary data

RAW

BLOB Binary data (up to 4 GB)

BFILE Binary data stored in an external file (up to 4 GB)

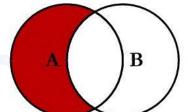

ROWID A base-64 number system representing the unique

address of a row in its table

A B

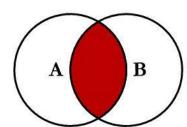

SELECT <select_list>
FROM TableA A
LEFT JOIN TableB B
ON A.Key = B.Key

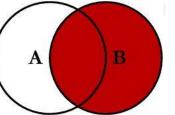

SELECT <select_list>
FROM TableA A
LEFT JOIN TableB B
ON A.Key = B.Key
WHERE B.Key IS NULL

SELECT <select_list>
FROM TableA A
FULL OUTER JOIN TableB B
ON A.Key = B.Key

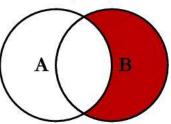

SQL JOINS

SELECT <select_list> FROM TableA A INNER JOIN TableB B ON A.Key = B.Key

SELECT <select_list> FROM TableA A RIGHT JOIN TableB B ON A.Key = B.Key

SELECT <select_list>
FROM TableA A
RIGHT JOIN TableB B
ON A.Key = B.Key
WHERE A.Key IS NULL

SELECT <select_list>
FROM TableA A
FULL OUTER JOIN TableB B
ON A.Key = B.Key
WHERE A.Key IS NULL
OR B.Key IS NULL
